6:19 PM

Draw Background elements first

for the sky to darken → fill colour (0, 0, 125)
 $\begin{matrix} \uparrow & \uparrow & \uparrow \\ +x & +x & +x \end{matrix}$?

Fill color (255, 0, 0) ← point A

Draw. Shape (get mouse X, 175, get mouse X, 200, get mouse X - 20, 200, etc.) ← point B

← point C

if (mouse button held down) == true

set fill color yellow

set line color yellow

draw triangle (get X

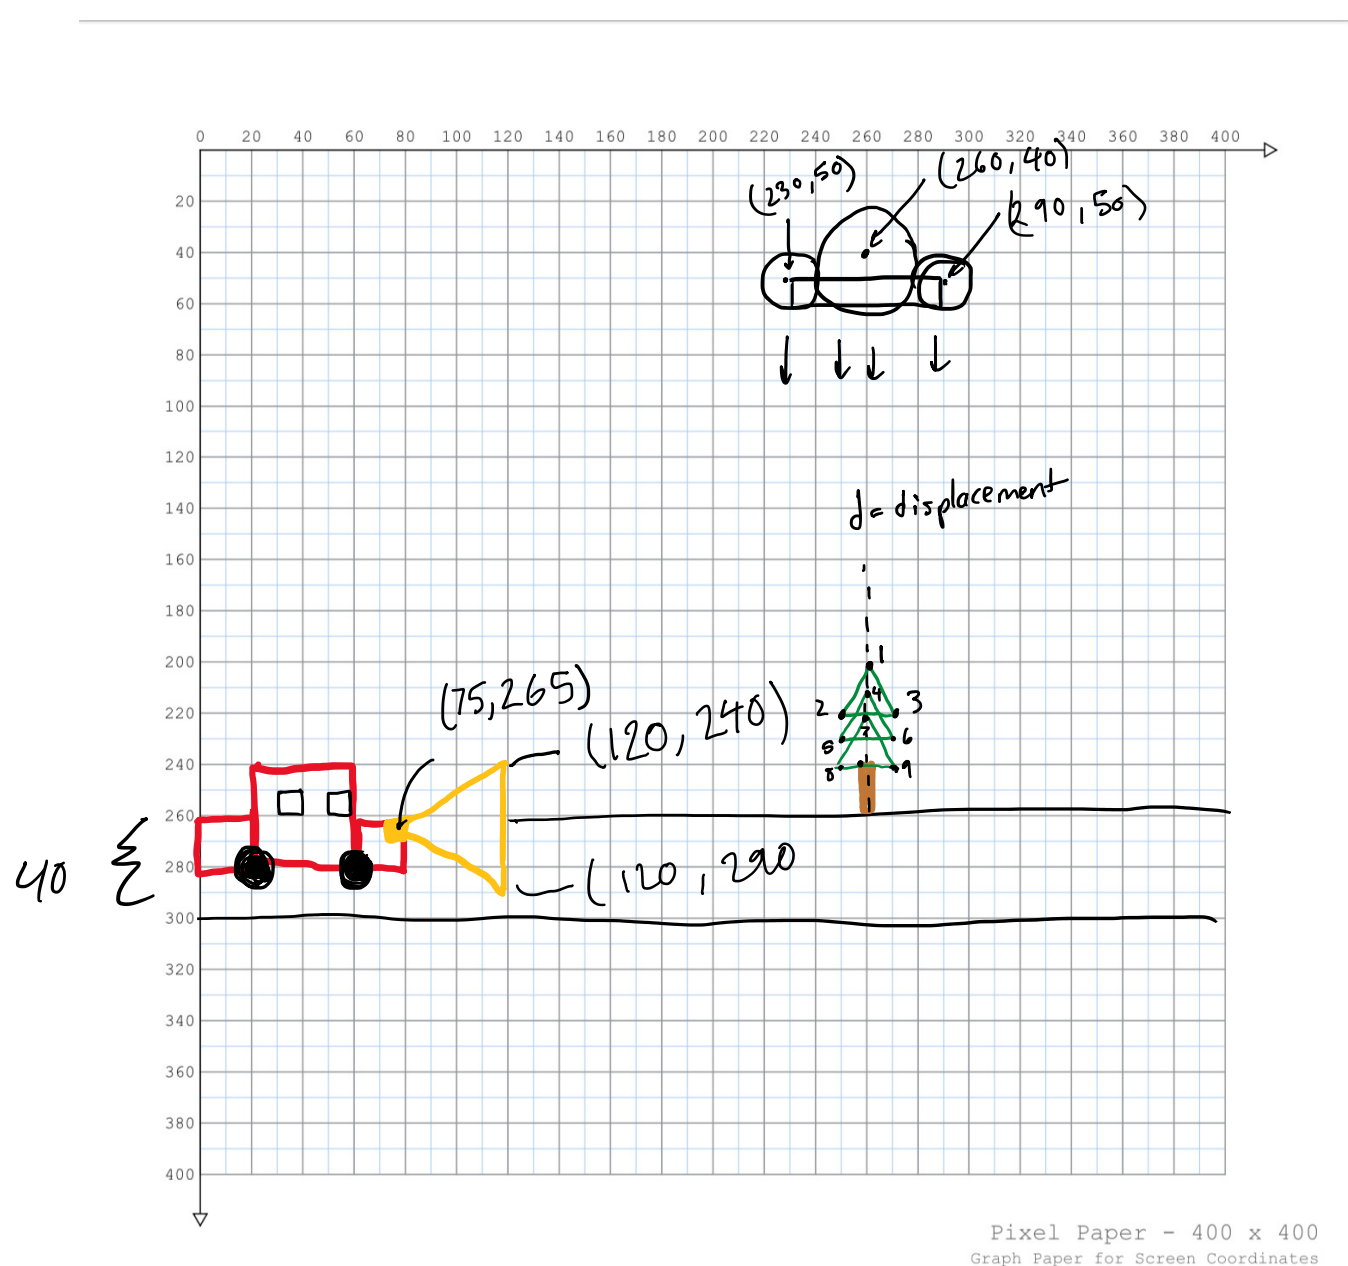

cloud moving backwards

draw circle (get mouse X * -1 + starting point, 40

draw circle

draw circle

Trees flashing by. (Owen gave 2 methods)

Grass (72, 111, 56)

Sky Blue (130, 200, 229)

float r = 0;

float g = 0;

float b = 0;

ColorF color = new (r, g, b)

Adding trees.

Pine Tree (62, 134, 103)

Trunk (75, 40, 30)

d = displacement

1. x+d, 200
2. x+d-10, 220
3. x+d+10, 220
4. x+d, 210
5. x+d-10, 230
6. x+d+10, 230
7. x+d, 220
8. x+d-10, 240
9. x+d+10, 240
10. x+d-5, 240, 10, 20

I know that am going to copy paste the same tree at different distances, so I added a variable to easily change that distance with out going into each bracket of the draw triangle.

Also add a variable "s" for the speed of the trees moving.

At a speed of -2x, the furthest a tree can be seen is 1200x
